

Healthcare Analytics for Episodes of Care

*Enhance quality of care, improve medical outcomes,
and manage costs with Episode360™*

Get a 360-degree view of every episode of care in your claims data.

Complete Healthcare Analytics for Episode of Care

Would your healthcare organization like to:

- Get a more precise picture of the cost of health care?
- Track dollars spent on physicians, facilities, and pharmacies?
- Optimize provider networks?
- Manage provider quality metrics to support 'Pay for Performance'?

If your answer is **yes**, then **Episode360™** was designed for you.

Healthcare organizations have long understood the potential value locked up in the claims data they routinely collect and store. Unfortunately, while the data exists, its value has been limited.

- The claims data lives in numerous heterogeneous systems (claims, labs, pharmacy systems, and others) without any integration
- Management reporting is tedious and may require numerous iterations
- Decision making is impeded by slow access to information

Episode360™

Specifically designed for healthcare organizations, **Episode360™** offers a 360-degree view of every episode of care in your data, providing a single, consolidated view of data from a myriad of systems such as claims, lab, pharmacy, dental, vision.

Episode360™ helps you slice and dice, and completely analyze:

- The performance of healthcare providers
- High dollar episodes
- Top procedures overview
- Episodic Risk Groups (ERG)
- Episodic Treatment Groups (ETG)

An end-to-end business intelligence solution, **Episode360™** will allow your organization to unlock the value of data:

- Provide Key Performance Indicators (KPI) through dashboards and scorecards
- Generate reports from a centralized data repository
- Eliminate multiple versions of stored data

Project Performance Corporation specializes in providing management consulting and information technology solutions crafted to meet your specific business needs
